Ridgeline HubSpot Load - Gaps

HubSpot test account 247726307 · as of 2026-10-20

1. Data not loaded

Gap	Source file	Rows	What it blocks	Possible fix
Deal stage history	`salesforce/OpportunityHistory.csv`	10,847	Time in each stage, stage-to-stage conversion, pipeline as of a past date	Deferred: covered in the Salesforce phase (source is a Salesforce file)
Line items and products (optional)	`salesforce/Product2.csv`, `PricebookEntry.csv`, `OpportunityLineItem.csv`	12 / 12 / 11,740	Product-level revenue (subscription, services, hardware)	Load products and line items; pilot first, because line items don't add up to the deal amount on 1,676 deals
Campaigns	`hubspot/campaigns.csv`	198	Campaign records in HubSpot	Not loaded. All 198 will be loaded at once after the decision on 24 names with parentheses, which HubSpot rejects
Campaign budget and spend	`hubspot/campaign_budget_spend_items.csv`	309	Budget and spend per campaign in HubSpot	Not loaded; loaded together with the campaigns

2. Open question

Gap	Source file	Rows	Question

Campaign-contact touches	`hubspot/campaign_contact_associations.csv`	86,713	**Do we really need these inserted?** HubSpot calculates first-touch and influenced attribution itself from tracked clicks and opens. Contacts can be linked to campaigns explicitly, but HubSpot's attribution numbers stay at 0. Options: explicit links, a custom object for the BI, or skip.

3. Differences from the source

Gap	Detail
Create date on contacts and companies	HubSpot treats it as read-only, so the native Create date shows 2026-10-18. The original date is in `rl_source_createdate`. Deals keep their original create date.
Archived owners	23 owners are `archived = true` in `owners.csv` but are active users in HubSpot. Kept active by decision.
Duplicate emails	4 contacts are loaded without an email, because another contact already has it. The email is kept in `rl_duplicate_email`.
MQL goal progress	The 3 goals are loaded, but HubSpot calculates progress from its own MQL entry dates, which show the load date. Progress in HubSpot won't match the data; use `rl_date_became_mql` in the BI. Goals are assigned to Zachary Wood, the Marketing owner who created them in the source.
HubSpot deal lifecycle sync	HubSpot automatically moves companies and contacts linked to a Closed Won deal to `customer`. It changed 3 companies the source keeps at `opportunity`; they were set back, and the loader restores lifecycle stages after every load. Records may change again if deals are edited by hand.
