Ridgeline Sandbox Load - Gaps

HubSpot test account 247726307 · Salesforce trial org 00DkO0000003fMoUAI · as of 2026-10-21

HubSpot

1. Data not loaded

Gap	Source file	Rows	What it blocks	Possible fix
Line items and products (optional)	`salesforce/Product2.csv`, `PricebookEntry.csv`, `OpportunityLineItem.csv`	12 / 12 / 11,740	Product-level revenue (subscription, services, hardware)	Load products and line items; pilot first, because line items don't add up to the deal amount on 1,676 deals
Campaigns	`hubspot/campaigns.csv`	198	Campaign records in HubSpot	Not loaded. All 198 will be loaded at once after the decision on 24 names with parentheses, which HubSpot rejects
Campaign budget and spend	`hubspot/campaign_budget_spend_items.csv`	309	Budget and spend per campaign in HubSpot	Not loaded; loaded together with the campaigns

2. Open question

Gap	Source file	Rows	Question
Campaign-contact touches	`hubspot/campaign_contact_associations.csv`	86,713	**Do we really need these inserted?** HubSpot calculates first-touch and influenced attribution itself from tracked clicks and opens. Contacts can be linked to campaigns explicitly, but HubSpot's attribution numbers stay at 0. Options: explicit links, a custom object for the BI, or skip.

3. Differences from the source

Gap	Detail
Create date on contacts and companies	HubSpot treats it as read-only, so the native Create date shows 2026-10-18. The original date is in `rl_source_createdate`. Deals keep their original create date.
Archived owners	23 owners are `archived = true` in `owners.csv` but are active users in HubSpot. Kept active by decision.
Duplicate emails	4 contacts are loaded without an email, because another contact already has it. The email is kept in `rl_duplicate_email`.
MQL goal progress	The 3 goals are loaded, but HubSpot calculates progress from its own MQL entry dates, which show the load date. Progress in HubSpot won't match the data; use `rl_date_became_mql` in the BI. Goals are assigned to Zachary Wood, the Marketing owner who created them in the source.
HubSpot deal lifecycle sync	HubSpot automatically moves companies and contacts linked to a Closed Won deal to `customer`. It changed 3 companies the source keeps at `opportunity`; they were set back, and the loader restores lifecycle stages after every load. Records may change again if deals are edited by hand.

Salesforce

1. Data not loaded

Gap	Source file	Rows	What it blocks	Possible fix
Opportunity line items	`salesforce/OpportunityLineItem.csv`	11,740	Product-level revenue (subscription, services, hardware)	Pending decision. Once an opportunity has line items, Salesforce replaces its Amount with their sum, which would change Amount on 1,714 opportunities
Deal stage history	`salesforce/OpportunityHistory.csv`	10,847	Time in each stage, stage-to-stage conversion, pipeline as of a past date (in either system)	Skipped by decision. Salesforce can't import it; the guide suggests a custom history object or testing off the CSV
Objects outside the guide's list	`OpportunityContactRole`, `OpportunityCompetitor`, `OpportunitySplit`, `ForecastingQuota`	4,527 / 925 / 152 / 139	Contact roles on deals, competitor records, split credit, rep quotas	Skipped by decision. Splits and quotas would need real Salesforce users as owners

2. Differences from the source

Gap	Detail
Record owners	The trial has 5 user licences for 45 source owners, so every record is owned by the loading user, as the guide says. The source owner ID is in `Ridgeline_Owner_Id__c`; the 77 source users are in `Ridgeline_User__c`.
Created date on campaigns and products	Salesforce doesn't allow setting it on these objects. The original is in `Ridgeline_Created_Date__c`. Accounts, contacts, leads, opportunities and campaign members keep their original created date.
Lead conversion date	Converted leads show the load date as the conversion date. The original is in `Ridgeline_Converted_Date__c`.
Last modified date	Shows the load date on the 2,278 converted accounts and 2,098 converted opportunities, because the conversion writes to them. 29 accounts have a last modified date earlier than their created date in the file, which Salesforce rejects; they use the created date.
Campaign member first responded date	Set by Salesforce from the member status. The original is in `Ridgeline_First_Responded_Date__c`.
Trial org expiry	The org expires on 2026-11-20. Reload into a new trial before then; the loader does the whole setup.
